**Nutec Systems, Inc. to Distribute  
*aps* Products in North America**

Nutec Systems, Inc. announces the North American release of the *apsolute*: the latest, thermal inkjet alternative to all existing coding technologies including CIJ, Laser, Piezzo & Valve Jet.

**The *apsolute* has the ability to print on plastic,  
foil and non-porous surfaces.**

While the number of products offered by marking and coding companies has increased through the evolution of existing solutions and new technologies, manufacturers still look for a concept that brings reliability, simplicity, quality, flexibility at the best cost of ownership. This is achieved by the launch of the *apsolute*.

Over the past decade Nutec Systems, Inc. has become the leader in marking and coding with Hewlett-Packard® technology in the Pharmaceutical and Medical Devices. However, the number of substrates on which we were able to print was relegated to porous surfaces due to the type of inks available. With the *apsolute* this limitation is a thing of the past. *apsolute* is a unique industrial **mono-fluid multi-head** printer using **Thermal Inkjet technology** print cartridges, which, for the first time, are complemented by fast dry/alcohol inks suitable for printing onto **non-porous packaging materials, i.e.: plastics, coated surfaces, foils, etc.** without the need for special drying techniques.

The foundation for the reliability of *apsolute* lays in its simple HP print cartridge concept with zero moving parts supported by quality engineered hardware and electronics. Without moving parts maintenance is almost non-existent, and the risk of an unexpected production line shutdown becomes a headache of the past.

Quality is not simply a function of the design of the printer. Thermal Inkjet technology with its **Windows True Type fonts** and high resolution (up to 600 dpi) & graphic capabilities is exceptionally appealing.

**Staying Green**, *apsolute* uses ONLY environmentally friendly inks. No hazardous or polluting fluids are required to achieve quality and durable marking.

**\**aps* Germany GmbH is located in Herrenberg, Germany**
